STIC SEARCH RESULTS FEEDBACK FORM

Biotech-Chem Library

Questions about the scope or the results of the search? Contact the searcher or contact:

Mary Hale, Information Branch Supervisor Remsen Bldg. 01 D86 571-272-2507

· >	I am an examiner in Workgroup: Example: 1610
. >	Relevant prior art found, search results used as follows:
	☐ 102 rejection
	☐ 103 rejection
	☐ Cited as being of interest.
	☐ Helped examiner better understand the invention.
	Helped examiner better understand the state of the art in their technology.
	Types of relevant prior art found:
	☐ Foreign Patent(s)
	 Non-Patent Literature (journal articles, conference proceedings, new product announcements etc.)
>	Relevant prior art not found:
	Results verified the lack of relevant prior art (helped determine patentability).
	Results were not useful in determining patentability or understanding the invention.

    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               80

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                for PT-NANBH but which did not react with viral antigens DX113, BHC-5 BHC-7. Clone BR11 was identified which did not cross-hybridise with probes made from JG2 and JG3 (see AAQ12236 and AAQ12237). It was sequenced and found to have the sequence shown, which includes the Ecclinhers added during cloning. See also AAQ12239-Q12242. (Updated on 25)

CC GB-A-2239245 discloses a recombinant polypeptide BHC-11 which comprises CC an antigen obtained from the non-structural coding region (NS) (the 3'CC end) and one antigen from the structural coding region (S) (the 5' end) CC of the NANBH virus. Specifically BHC-11 (AAQ46191) contains a portion of the virus called NS5, (putative replicase) CC the non-structural region of the virus, called NS5, (putative replicase) CC structural region which contains almost all the core protein sequence (9 amino acids from the N-terminal are not present) and a part of a sequence (9 contains almost all the core protein sequence (9 contains almost all the core protein sequence (9 contains almost all the core protein sequence (9 contains are used to screen for PT-NANBH, the screening is much more contigens are used to screen for PT-NANBH, the screening is much more sensitive as compared to the use of only two PT-NANBH antigens. Pref. CC antigens are described in AAQ46192-94. Two new antigenic regions of the CC PT-NANBH genome are given in AAQ46192-99. AAQ46202 describes an improved PT-NANBH recombinant polypeptide. New recombinant polypeptide for diagnosing hepatitis C - contains three distinct antigens from different viral regions, also useful in protective

P-PSDB;

Claim 7; Page 85-90; 99pp; English.

The NS3 specific region of pDX200 was amplified by PCR using primers D360 and D361 (AAQ46201 and AAQ54882). The obtained fragment was then cloned into DDX136. Transformants were analysed to identify those which contained the NS3 sequence inserted in the correct orientation between the NS5 and core parts of pDX136, this was called pDX208 (AAQ46202). Recombinant baculovirus BHC-28 was produced. Insect cells infected with BHC-28 produce antigen NS5-NS3-core. If at least three different PT-NANBH antigens are used to screen for PT-NANBH, the screening is much more sensitive as compared to the use of only two PT-NANBH antigens. Pref. antigens are described in AAQ46192-94. Two new antigenic regions of the PT-NANBH genome are given in AAQ46192-99. AAQ46202 describes an improved PT-NANBH recombinant polypoptide. (Opdated on 25-MAR-2003 to correct PN field.) (Updated on 27-AUG-2003 to correct PN

Pref. antigens are described in AAQ46192-94. Two new antigenic regions of the PT-NANBH genome are given in AAQ46198-99. AAQ46202 describes an improved PT-NANBH recombinant polypeptide.                This sequence is thought to encode viral structural and non-structural proteins of the PT-NANBH viral genome which are antigenic. It was isolated from human serum infectious for the virus. See also AAQ12236-4 (Updated on 25-MAR-2003 to correct PA field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CDNA was prepared from HCV genomic RNA. Full-length clone JK1-B (940 nucleotides long) and 14 shorter clones were isolated by PCR amplification, including clone JK2-A. Primer/probes derived from the sequences of these clones can be used in diagnostic assays for HCV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 1993-130638/16.

                                                                             cDNA was prepared from HCV genomic RNA. Full-length clone JK1-B nucleotides long) and 14 shorter clones were isolated by PCR amplification, including clone JK2-B. Primer/probes derived from sequences of these clones can be used in diagnostic assays for HAAQ40425-Q40439
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAQ40429

Full-length clone JK1-F nucleotides long) and 14 shorter clones were isolated by PCR amplification, including clone JK2-C. Primer/probes derived fro sequences of these clones can be used in diagnostic assays for AAQ40425-Q40439

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAT12704-T12709 and AAT12961-T12974 represent hepatitis C virus (HCV) El C and E2 protein coding sequence constructs. These sequences are included C in vectors for the production of recombinant El, E2, and El/E2 proteins. The recombinant proteins can then be isolated using a method of the CC invention. In the method, the envelope proteins are purified by carrying CC out a disulphide bond cleavage, or a reduction step with a disulphide CC bond cleavage agent, after lysis of recombinant host cells. The CC constructs containing the purified HCV envelope proteins can be used for vaccinating humans against HCV, for in vitro detection of HCV antibodies C in a sample, and in a serotyping assay for detecting one or more Serological types of HCV present in a biological sample. The constructs can also be immobilised on a solid substrate and incorporated into a reversed phase hybridisation assay for determining the presence or the CC genotype of HCV. The new purification method preserves the conformation CC of the recombinantly expressed El, E2 and El/E2, and eliminates CC contaminating proteins. Antigens isolated using this method are more corective with human sera than those isolated by known techniques
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                   The invention comprises an Hepatitis C virus (HCV) vaccine for liver disease. The vaccine of the invention comprises an HCV E1 protein as an antigen. The HCV vaccine is useful for reducing 1 disease (e.g. liver fibrosis) in a chronic HCV-infected mammal. present DNA sequence encodes an HCV E1/E2 protein.
                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                           New hepatitis C virus (HCV) vaccine liver disease, e.g., liver fibrosis
